

MANIFESTO

I, **Makadiya Deepkumar Hasamukhbhai(175090008)**, am contesting for the post of **Class Representative for M.Sc. Second year, Department of Mathematics, IIT Bombay** for the year 2018-2019. If I get elected I propose to do the following:

INITIATIVES:-

- I will make sure that everyone receives all the information, be it on GPO, Ganit or any other relevant message.
- If the allotted class timings do not suit the students, I will find slots when everyone is free and try to convince the professor to change the slot.
- If the exam time table is too hectic for the students, I will try my best that the professor agrees to change the exam date or time, whichever is required.
- I will ensure that all the students' issues are resolved within time.
- I will maintain a good relation between professors and students.
- I will try that a course gets run in the summer even if there are only 3-4 students; and if that is not possible for some reason, then I will encourage the students for self-study so that next time they pass the course easily.
- I will try to make sure that everyone attends all the classes and if for some reason they are not able to, I will try to know the reason behind it and help them if there is any difficulty.
- I will give all the information regarding admission procedure for Ph.D. at various universities in India and abroad, to the students interested for the same.
- If there is any student who wants to do a project, then I will pass all the relevant information about the same to him/her and also try to convince the professor to agree for it.
- I will make sure that there is proper interaction with the new upcoming batch and that they don't face any difficulty in course registration or any other thing.
- I will ensure that the junior batch gets all sorts of help, be it subject related or any other general issue, from me as well as my classmates.
- I will take all the relevant study material and previous question papers (if possible) for all the courses from the senior batches and pass it on to my classmates.
- I will see to it that the students who want to pursue Ph.D. or have interest in mathematics do attend the seminars and talks held at the department.
- If the students face any difficulty regarding the course structure or speed of the courses, I will convey the same to the professor.

- I will inform the students, who are interested in placements, about the courses in other departments which are relevant for them and if they want to sit through the course, then I will talk to the course instructor on their behalf.
- If need be, I will help the other council members in whatever way I can.

Lastly, I will try my best to solve all types of academic as well as general queries of the students.
